English

Sinhala

About Me

Hello! I'm Ayesh Chamodye, a passionate software developer with a strong interest in building innovative web solutions. My journey in tech began with a fascination for creating digital experiences that solve real- world problems. With experience in both front-end and back-end technologies, I enjoy working across the full stack. I'm particularly interested in cloud infrastructure, scalable architectures, and crafting intuitive user interfaces.

Projects

- Velvet Vogue (PHP, MySQL, HTML/CSS, JavaScript)
  - Developed a custom e-commerce website for a fictional clothing brand, featuring category-based product listings, advanced filtering, cart and checkout functionality, order management, wishlist, and an admin panel for product, category, and customer management.
- Enomy-Finances (TypeScript, Next.js, Firebase)
  - Designed and implemented a personal finance management system with expense tracking, income categorization, budgeting, and real-time data synchronization using Firebase. Applied the Spiral SDLC model with focus on risk management and quality assurance.
- CareerPathPro (TypeScript, Tailwind CSS, Vite, Drizzle ORM)
  - Built a career guidance platform with a modular client-server architecture, enabling users to explore career paths, track skill development, and access personalized recommendations. Integrated modern front-end tooling for rapid development and scalable design.
- Snake Game (JavaScript, HTML5 Canvas)
  - Created an interactive browser-based Snake game with real-time movement, collision detection, and score tracking, demonstrating mastery of DOM manipulation and game loop logic.

EXTRS ACTIVITIES

2nd runner up in Thinkfest hackathon

2nd runner up in Thinkfest hackathon I won 2nd runner up place of Thinkfest Hackathon 2025 hosted by ESOFT island wide against 40+ branches.

Practical tutoring sessions for diplomates

I'm doing some practical tutoring sessions for diplomates in ESOFT Kurunegala during my free time as a service.
